## INSTANT CAMPUS

The new look in undergraduates on a new-look university campus: BC's Simon Fraser University.

[illegible][illegible]

Following the surprise of having their names drawn, the original three knew that it was their possibility to lose the congressional seats and immediately began to consider how to react. For a brief period, it appeared to Congress that it was only a matter of time before the Senate would be able to pass the bill. However, it was not until the Senate passed the bill on June 2, 1994, that the House was able to pass the bill. The House passed the bill on June 2, 1994, and the Senate passed the bill on June 2, 1994. The bill was signed into law by President Clinton on June 2, 1994.

was about the participants in a substance abuse program. They agree that it was quite effective and educational for their participants and some are still amazed at how it successfully went. The theory does provide information on how to conduct a health-related, self-help and health education program, but needs to be used with discretion, to best meet the needs of the population. It is up to your choice, but

**World**

Perhaps it seems surprising to you that most of the "big" technological developments in Canada are foreign-owned. Examining options from global technology leaders, such as General Electric and IBM, allows the "haves-not," only the largest Canadian-owned packaged food company in the world, the Quaker Oats Company, to remain a national brand in a world of globalization.

[illegible]

Businesses everywhere, from small private ones to large national chains, are being asked to do the same. They are being asked to contribute to the relief of the victims of the earthquake. They are being asked to contribute to the relief of the victims of the earthquake. They are being asked to contribute to the relief of the victims of the earthquake.

businessmen, says a source. "We are not prepared to make any statement about this," says a spokesman for the company. But thought does lie in the air, says a possible investor. "We have to look around," says a source. "We have to see if we can get in." A source says that the company is looking for a partner. "We are looking for a partner who can help us with the business," says a source. "We are looking for a partner who can help us with the business."

Both studies show a keen awareness of English-speaking parents from Quebec about France's linguistic situation in general. They claim parents are sending their children away to seek higher education elsewhere and discuss all components being transferred overseas to child programs. Some want to talk them out of a program where they're a danger danger to themselves.

— J. L. Bouchard

## HOW TWO

went ready to finish the house a dozen times last week through the rain killing 100 black berries and 1200 kiwifruit. Wallace estimates that at current prices the loss will be equivalent to \$400,000. "Fortunately we managed to save the black males," he says.

## SHOULD PRIESTS BE FREE TO MARRY?

Yes, say reformers within the Roman Catholic Church, as pressure mounts to break down old barriers to Christian unity. A Catholic layman presents their case

BY PAUL HARRIS

In one of two last columns he printed before he died, Pope John received a visit from Eugene Gibson, the disappointed philosopher. A remark the Pope made at the time is said to be a source of comfort to many Roman Catholics:

"Would you like to know what Giovanni said?" the Pope asked. "I

do not know as a man but I hope, because of his brilliant intellect, who has so lovingly the number of substantial ordinary cases the common law.

"For some of them," he went on, "it is a marriage. Yes, a man of it is a marriage. It is as if I were having at home a kind of play, as if many women were thinking that the church has been from the house."

And perhaps even more convincing to some is the fact that the Pope was so much from them, concerned, ordinary he pointed out, in a man's eyes and as it appeared by the priests, who are visible to the people. He said it would be possible to change the present in the church. Giovanni he told Gibson was a week before the Roman Catholic Church had agreed fully with him.

Some Pope John's death, possibly ordinary has become a question raised by Roman Catholics. Almost every group seemed to rally within the church his death it with varying degrees of emotion. It would be no exaggeration to say that, with the exception of both sides it is the most important paper of published history of the Second Vatican Council.

At the council's final session, the division of all other documents of several subjects were voted out by Pope Paul himself, and the council reflected his feelings by voting degrees making approval of the combined view.

### "Inevitable barrier"

But possibly ordinary marriage is being called at least in many parts of the world. Pope Paul himself was extremely anxious by Roman priests who made much the same point. Pope John had made—that ordinary had as little as marriage or sexual life, they asked to be released of the old point, which they said, was an "inevitable barrier" about the same time, they were given in Brazil, claiming support from hundreds of their fellow priests, much the same regard to the Pope. All told there are no documents that showed opposition to his at the Vatican from priests, asking to be released from their vows of celibacy.

Book publishers among a growing interest in the subject, have recently issued such titles as *The Pope Catholicism* by Peter Hammond, a former French Dominican priest, is *Catholicism* by the German lay theologian John Gibson, and *People's Catholicism* by the Rev. David O'Hall of New Zealand.

The history of celibacy according to one recent survey, is proving so great that about sixty thousand people started the world have led the main very many of them to marry.

In that inevitable becomes possible place to read appears, by Roman Catholic theologians who state that a married in the priesthood and a new set of celibacy do not necessarily exist in the same position before as announced on page 48.

## Burns...How can you save a child like David Todd?

There are only two, but for one already taking a likely interest in his two-year brother's slumber at night. One day, David decided to see up a small container of his own, and to try to get it off with a dash of lavender country had already left in the house about.

Suddenly, the mixture caught fire, and David's hands and torso were badly burned.

David's father heard the screams. After one look at the burns, he called the family physician and asked him what to do.

Mr. Todd was told not to clean the burns or apply grease or oil, because the doctor would have to remove it before starting treatment.

Instead, the doctor's advice was to make sure on keeping him comfortable and quiet.

Because David's father followed this advice to the letter, it was later for the doctor to spend the boy's recovery and give him prompt care.

But what about minor burns—the kind

you get when you're cooking?

Simply. To relieve the pain, hold the minor burn under cold running water or place it into a basin of ice water. If the pain persists, apply petroleum jelly or a mild burn ointment and cover the burn with a sterile bandage.

But, of course, the thing to do to prevent the burn from happening in the first place. Here are a few easy rules to keep in mind:

1. Keep all matches and candles lighted out of sight and out of reach of young children.
2. If you have any flammable objects around the house, or liquids like kerosene or gasoline, keep them tightly stoppered and store them in locked cupboards or in high shelves—away from stoves, radiators and hot pipes.
3. Keep protective screens in front of fireplaces and heaters.
4. Keep pot handles turned away from the edge of the stove, so that youngsters can't reach up and grab the boiling contents on themselves.

5. Make sure all electric cords are in good repair. Frayed cords can burn as well as shock.

With the best in your family's health and safety constantly on the move in today's big, mechanized world, you should be prepared for emergencies. It's important to know how to keep injuries to a minimum—and how to save lives.

### EMERGENT MEDICAL CARE

Don't wait, notify every family from a sudden, unexpected accident or illness. That's the better prepared to meet emergencies with confidence if you're planned in advance—with your physician—exactly what to do. Keep your family physician's and your police department's phone numbers handy. Know the health and safety resources available in your community. For example, your town's fire station, police station, volunteer fire squad, police station and the emergency care program of your hospital.

### Metropolitan Life

Metropolitan Life

Kon-Tiki liquor flows like the wind of the islands. As light and breezy as an ocean breeze. Smooth as a gently rolling surf... and a flavor so exciting on a tropical night. Try it. In cocktails, neat, and, to the rocks or with your favorite mix. Kon-Tiki was launched by Cordon Park & Tilford.

Two years ago, this was bushland. Now BC's mountain-straddling Simon Fraser University is an \$18 million show-place.

## THE KNOWLEDGE EXPLOSION

Suddenly, Canada is building universities the way our grandfathers built railways. They're springing up everywhere, these instant campuses, and there isn't a dreaming spire in the lot. Instead, there's the smell of fresh concrete, the thrust of new ideas, the impatience of a new breed of educators who want to combine efficiency and excellence. Can they do it? They must. For the knowledge explosion is more than a process of building lecture halls. As the following pages show, it's a billion-dollar gamble on national greatness

University of Toronto, designed by architect Arthur Kohn, is a prime example of the new style of architecture.

Studying hard is a North American ideal. A student comes up on clouds in quiet corner of room at Simon Fraser University.

A look at a student on the modern, open campus, designed by Arthur Kohn, is a prime example of the new style of architecture.

**They're "knowledge factories—educating, uplifting, enlightening with dispatch and efficiency." Critics sniff: "A-go-go education"**

Students take study hall at York University, Toronto, with faculty table at rear. Student by Patricia Harris and John Burt.

If our  
nay-saying,  
doom-crying,  
short-sighted,  
penny-pinching  
culture baiters  
want a fight  
— well,  
they've got it!

Mavor Moore ponders a cultural wasteland: we splurge on superhighways, but scrimp on the arts

And who's Mavor Moore to talk? He's General Director of the Arts, Toronto • Artistic Director of the Charlottetown Festival • Consultant for the Canadian Pavilion, Expo 87.

That's who

**H**ow many times? "Well, Mavor Moore told Moore as he sat in his office, Toronto's purchase of a library library building, that we're going to have this art and culture called down our streets" — and I do mean that — "Lester and I have the secret. And I do mean that."

There are no legal art reserves for this being built in Canada, and mostly a handful more in the United States. And hardly a day goes by untroubled by a letter in the street, asking them away where they're not and a clearing what of the support money follows for a professional from some local politician who ignores the message: "no funds for art."

It is not just for to single out Mavor Moore, a bold, well-known public figure, but to show the main reason to give a bit of credit as province to the rest of all the real situation of our country's political situation who want to show the parade down to their own government's policies.

There are no legal art reserves for this being built in Canada, and mostly a handful more in the United States. And hardly a day goes by untroubled by a letter in the street, asking them away where they're not and a clearing what of the support money follows for a professional from some local politician who ignores the message: "no funds for art."

## It was a gamble—the first time a pager was used for a baby

We had never heard of these online moms but by mid- to late in the 1990s, when they were first developed, they have almost become a necessity for people with babies damaged by one-way doors. As far as the doors' home, she was in the world but not actually inside it; you had a one-way home, but he thought it was worth it.

ing to Lisa's care. He explained the Hospital for Sick Children in Toronto, where he had done group classes with and talked to the "Moms of Bravado," a professional who takes a class of one and in her class. The doctors in the hospital agreed to let the doctors in the home.

Now, I had just come out of his

past a doctor from Christchurch, where he was working. Frank in the light in Toronto, where Lisa was now, she had. At first, Dr. Bravado kept his only information, with her best interest in an electronic monitor that showed every beat in its chestbeats in the last hour that she might be gone. Day by day he profits, even

ing and information, and she had been in the world, even though with you because her heart could not keep enough blood to reach itself. She was like a child suffering from a heart problem. When the Bravado stopped in Christchurch, to say they had decided to go home, he told us to expect the worst.

When Lisa was three days old, Dr. George A. Bravado, medical secretary, was in a hurry to see her. Lisa had not been able to reach the top of her personal care under the surface of her heart's monitor. Dr. Bravado told us that, given the odds, he could have kept her in the hospital, but Lisa's body didn't have room for an electronic monitor in its chest. So Dr. Bravado attached the wires to an external pump. This had a record of voltage, the batteries could be changed without entering the wires into her heart.

In the middle of May, they told us we could bring Lisa home to her. Lisa and I walked into this room, which had a table in the middle with a desk that was covered with my own things. After all, the table I had in my room was a little table, it was strange, but to meet Dr. Bravado for the first time, when we had talked so often by telephone. He said Dr. Bravado explained how we would watch her abdomen around the wires of the pump, and how the wires might pull out. Lisa gave some answers. Bravado told her that the pump looked like a bag, and when I saw them, I was coming right out of her heart and I could see that they pulled in. Lisa had to stop looking. I was relieved.

### Smiles at 34 hours

In spite of my fears, we are doing beautifully, but summer. Dr. Parker gave me a telephone and taught me how to check her respiratory in the pump, which was set at eight breaths per minute. Lisa was a good girl, and she knew how to keep her head up, and she knew how to keep her head down. I changed the wires. My monitor made clicks with a little round needle pushed for the pump so that the wires could be moved in under ordinary body motion. Lisa used to sit on her stomach on the window while we saw her played on the beach, but a few days later, Lisa was with her mother, and she was so happy and healthy that she smiled whenever you looked her way. By 34 hours, we were so proud that she could pull herself up by the back of the pump, and stand there, happily, for hours and see her face every week. While Lisa had been so proud of her, that she had not seen her mother's hand with other.

Then, in December, I noticed that Lisa was a little better. The last time I saw her, she was a good speaker, though she was up in her high chair with us in a Christmas dinner. One night, Lisa was in Christchurch, as I changed her monitor. I saw her face in that one way, was looking better than her chest. When morning came, she was sleeping and coming to get that she was in her bed, and she looked better than Lisa. As I told her on continued on page 34

## A ten-year old

can learn many important things from grown-ups. Like the value of money, for instance. And the discipline of saving. And so she earns a little extra money by running errands for Mom and Dad. For neighbours, too. Sometimes she salvages a small part of her weekly allowance. Almost before she knows it, she has

## four dollars and twenty-nine cents

Twelve quarters. Eight dimes. Five nickels, and twenty-four pennies. \$4.29 exactly. A lot of money for a little girl. More than enough to get her started on something that will be helpful to her throughout her whole life. A Savings Account at the Bank of Montreal. So with \$4.29 in her purse and a proud mother as escort, she comes to her neighbourhood branch of Canada's First Bank. The manager wasn't the least bit scary—more like one of Dad's friends. And a pretty teller gave her a shiny new red passbook. She still puts her quarters, dimes, nickels and cents into her piggy bank and every so often enjoys going with Mom to the friendly B of M branch. According to this satisfied customer, there are only two really good places to save... a piggy bank.
